

The EZ Care™

The EZ Care™ was built with adaptability and simplicity in mind. Due to the transition from POTS lines to VOIP, many PERS companies have wasted time, money and headaches trying to get their customers to connect their devices. Many of these customers may not even know that their phone line is VOIP.

The EZ Care™ delivers the ultimate in versatility. The EZ Care™ works with any VOIP provider, and allows for alarm transmission over any phone line no matter what the service provider—including, but not limited to, Magic Jack™. Designed with the future in mind, the EZ Care™ has the built in ability to upgrade to a cellular module for homes with no service by simply inserting a GSM card (available Q3 2013) into the device. This future proofs your investment- if your customer leaves POTS or their VOIP provider, you can replace that service with cellular without buying a whole new box. Plus with EZ Pair™ programming, the device can add pendants and/or watches at the touch of a button.

Set up is simple. Plug the EZ Care™ into any live phone jack in either port. That's it! You're done. No more spending hours trying to explain the difference between the line and phone ports. No trying to help find an outlet next to a phone jack. No struggles. Plug and go with EZ Care™.

Features

- **Universal Phone Line Compatibility-** The EZ Care™ will communicate through any phone line using CID into a Sur-Gard™ receiver. VOIP or POTS, it does not matter; just plug and play.
- **50 Zones-** The EZ Care™ can connect up to 50 devices to one base station.
- **Range-** The EZ Care™ pendant has a range of 400 feet.
- **Upgradability-** Add a power cord, battery back-up, or add a cellular module to your EZ Care™ just by purchasing add-ons instead of a whole new product. Also available (Q2 2013): Fall detection, inactivity alert, smoke detection, CO2 detection.
- **Built in power supply-** The EZ Care™ has an onboard circuit that supplies power directly from the phone line; so if power goes out you are still safe and secure.
- **Weekly timer test-** Automatic weekly timer test—no need to activate.
- **Programming-** Just fill out our online form and the Easy Care™ setup is done. No cumbersome device programming.
- **Monitored battery life-** The device will notify central when the pendant battery needs replaced.
- **Backup battery-** Customers with Cellular upgrade can use two “AAA” batteries which will suffice for 4 hours of back up or 45 days for landline EZ Care™.
- **Cost-** The EZ Care™ costs less than any system on the market today.
